CS4Ed content experts, technical architects and developers, authors, graphic designers, animators, and educators apply award-winning talent to creating products, programs, and systems that work for learners, and fit an institution's or company's acquisition plan or marketing strategy.

CS4Ed's Implementation Services can help:

- > **Inform** your organization and the participants in your project or program how to use specific development and risk mitigation processes to match the in-depth objectives, practical constraints, and available resources of your project or program;
- > **Identify** alternative implementation strategies that will maximize the strengths of your project and eliminate, or control, weaknesses and risks of your implementation environment;
- > **Manage** the development of engaging scripts, prototypes, high-quality illustrations and animations, and a high performance, long-lasting infrastructure; and
- > **Guide** implementers to adopt or re-use existing components and balance project context and constraints with installation, maintenance, and evolution in the field.

**Effective
product
development &
marketplace
success depend
on diverse
expertise and
practical
experience.**
